

Incident documentation/20150408-s2-SiteStatsInit

< [Incident documentation](#)

Summary

At around 2015-04-08 12:25:34 UTC, S2 slaves encountered <https://phabricator.wikimedia.org/T95426> (SiteStatsInit::edits and SiteStatsInit::articles query storm) and S2 wikis started returning errors. The slaves' event schedulers started killing slow queries after 5min and by 2015-04-08 12:35:34 things returned to normal.

Conclusions

This happened a year or so ago and led to <https:// Gerrit.wikimedia.org/r/#/c/114994/>. Something else has since broken allowing these to run as wikiuser from the web, and not a maintenance script or job.

Actionables

- Status: ■ **Done** [phabricator:T95426](#): Move SiteStats queries to vslow hosts.
