

## Xbox Live Experiencing Partial Outage

The troubles have been noted by Microsoft and are being worked on.

**UPDATE:** A Microsoft spokesperson has told IGN that the issues with Xbox Live on Xbox One have been resolved, and users should now be able to sign in without issue.

It looks like Microsoft's Xbox Live is experiencing a partial outage, with core services for the Xbox One listed on the [Xbox support site](#) as "limited."

The problem appears to be with signing in to the service and doesn't appear to affect Xbox 360 owners at this time. No other apps on the Xbox One are a down at this time, and the problems with signing in are currently under investigation, with Microsoft promising that it has a team working on the problem.

No cause has been cited for the problem.

PlayStation Network [suffered from reported outages](#) last week following the 2.0 firmware update. Sony issued [a 2.01 update today](#) to take care of problems associated with the previous update.

This story is developing. Keep checking back as more information becomes available.
